1.   (currently amended) A system for web based imaging comprising:
         at least one graphic store for storing a plurality of different graphics;
         a networked and autonomous group composition store that is networked and
autonomous for storing and providing imaging clients access to a plurality of
compositions, with each different composition referencing at least one graphic in the
at least one graphic store that is external to the group composition store and
including information on a placement of each referenced graphic on a canvas data-
to-place the referenced graphic within the composition, wherein at least two of the
compositions reference the same graphic in the same graphic store without
duplicating the graphic; and
         a plurality of different user profiles that are accessed from at least one user
profile store, each for a different imaging client, with each user profile including a
reference to the group composition store, wherein the profile store is networked and
autonomous.

2.   (Original) The system as defined in claim 1, further comprising:
         a default graphics store for at least one of the imaging clients;.
         a default composition store for the at least one imaging client, including a
composition therein with a reference to a graphic within a graphics store; and
         wherein the user profile for the at least one imaging client includes a
reference to the default graphic store and the default composition store.

3.   (Original) The system as defined in claim 1, wherein one or more of the user
profiles include a reference to a default composition within said group composition
store.

4.   (Original) The system as defined in claim 1, further comprising:
         a firewall protecting said plurality of imaging clients; and
         wherein at least one composition in said group composition store references
a graphic outside of said firewall.

Response To Office Action
Serial No. 09/923,957   -2-

5.   (Original) The system as defined in claim 1, wherein the group composition store contains a method that prevent at least selected ones of said imaging clients from deleting or modifying at least one composition in the group composition store.

6.   (Original) The system as defined in claim 1, further comprising a web extension that will enumerate compositions stored in the group composition store as available to the imaging client.

7.   (currently amended) A program product including machine readable program code for implementing:
       at least one graphic store for storing a plurality of different graphics;
       a ~~networked and autonomous~~ group composition store ~~that is networked and autonomous~~ for storing ~~and providing imaging clients access to~~ a plurality of compositions, with each different composition referencing at least one graphic in the at least one graphic store that is external to the group composition store and including ~~information on a placement of each referenced graphic on a canvas~~ ~~data to place the referenced graphic within the composition~~, wherein at least two of the compositions reference the same graphic in the same graphic store without duplicating the graphic; and
       a plurality of different user profiles that are accessed from at least one user profile store, each for a different imaging client, with each user profile including a reference to the group composition store, wherein the profile store is networked and autonomous.

8.   (Original) The program product as defined in claim 7, further comprising program code for implementing:
       a default graphics store for at least one of the imaging clients;.
       a default composition store for the at least one imaging client, including a composition therein with a reference to a graphic within a graphics store; and
       wherein the user profile for the at least one imaging client includes a reference to the default graphic store and the default composition store.

9.   (Original) The program product as defined in claim 7, wherein the program code for one or more of the user profiles include a reference to a default composition within said group composition store.

10.   (Original) The program product as defined in claim 7, further comprising program code for implementing:

a firewall protecting said plurality of imaging clients; and

wherein at least one composition in said group composition store references a graphic outside of said firewall.

11.   (Original) The program product as defined in claim 7, wherein the program code for the group composition store contains a method that prevent at least selected ones of said imaging clients from deleting or modifying at least one composition in the group composition store.

12.   (Original) The program product as defined in claim 7, further comprising program code for implementing a web extension that will enumerate compositions stored in the group composition store as available to the imaging client.
